SPECIAL CORD SET INSTRUCTIONS

A short power supply cord is provided to reduce the risks resulting from becoming entangled in or tripping over a longer cord.

Extension cords are available and may be used if care is exercised in their use.

If an extension cord is used, the marked electrical rating of the extension cord must be at least as great as the electrical rating of the appliance, and the longer cord should be arranged so that it will not drape over the countertop or tabletop, where it can be tripped over or pulled on by children.

NOTICE

This appliance has a polarized plug (one blade is wider than the other). As a safety feature, this plug will fit in a polarized outlet only one way. If the plug does not fit fully in the outlet, reverse the plug. If it still does not fit, contact a qualified electrician. Do not attempt to defeat this safety feature.

BEFORE FIRST USE

Place your oven on a flat surface.

Before using your oven, move it two to four inches away from the wall or from any objects on the countertop. Do not use on heat-sensitive surface.

OBJECTS SHOULD NOT BE STORED ON THE TOP OF THE OVEN. IF THEY ARE, REMOVE ALL OBJECTS BEFORE YOU TURN ON YOUR OVEN. THE EXTERIOR WALLS GET VERY HOT WHEN IN USE. KEEP OUT OF REACH OF CHILDREN.

GENERAL GUIDELINES

Baking: Baking function can be used as you would normally use your kitchen oven for roasting meats including chicken, or baking cakes, cookies and more.

Convection Bake: Convection baking/roasting uses a fan to circulate heated air around food as it cooks. For best results, use cookie sheets with no sides and baking dishes and roasting pans with very low sides to let maximum air-flow reach food. For the same reason, do not cover foods while cooking.

Most baking recipes recommend reducing temperatures by 25 degrees when using the convection feature. Always check doneness 10 minutes before suggested cooking time.

Broiling: Broiling function can be used for beef, chicken, pork, fish and more. It also can be used to top-brown casseroles and gratins. **Caution:** Aluminum foil is not recommended for covering the broiling rack. If covered, the foil prevents the fat from dripping into the drip tray. Grease will accumulate on the foil surface and may catch fire. If you choose to use foil to cover the drip tray/baking pan, be sure foil is tucked neatly around the pan and does not touch the wall or heating elements.

Toasting: Always have the rack in rack position B, as indicated in the diagram on page 6, for even toasting. Always position your item/items in the middle of the rack.

WARNING: Placing the rack in the bottom position or in the top position with the rack upward while toasting may result in a fire. Refer to rack position diagram for proper use.

Turning off the toaster oven broiler: Turn the timer dial to OFF. The indicator light will turn off.

OPERATION

Unwind the power cord. Check that the crumb tray is in place and that there is nothing in the oven. Plug power cord into the wall outlet.

Broil

NOTE: When broiling, add approximately $\frac{1}{4}$ cup water to the bottom of the drip tray to reduce sizzling and splattering. Place the broiling rack in the drip tray. The oven rack can be turned up or down depending on the thickness of the food being broiled. In most cases the oven rack should be in the higher position (position C – see rack position diagram on page 6).

To broil, set temperature and function dials to broil. Turn ON/Toast shade dial to the always ON position. Preheat oven for five minutes with door closed. After the five-minute preheat period, place the broiling pan in the oven. Always leave door ajar when broiling.

To stop broil operation, turn timer dial to OFF position.

NOTE: Never use glass oven dishes to broil.

Bake

To bake, turn the temperature dial to the desired temperature, turn function dial to bake position and turn ON/Toast shade dial to the always ON position. The oven indicator light will turn on. You will need to turn off the oven manually by turning the ON/Toast shade dial to the OFF position. Preheat oven for five to ten minutes (time will vary depending upon desired temperature); then begin to bake.

Convection Bake

To use convection baking/roasting, turn the temperature dial to the desired temperature, turn function dial to convection bake position and turn ON/Toast shade dial to the always ON position. The oven indicator light will turn on. You will need to turn off the oven manually by turning the ON/Toast shade to the OFF position. Preheat oven for five to ten minutes (time will vary depending upon desired temperature); then begin to convection bake or roast.

Most baking recipes recommend reducing temperatures by 25 degrees when using the convection feature. Always check 10 minutes before suggested cooking time.

Warm

To keep food warm, turn the temperature dial to 200°F (95°C); turn the function dial to warm position and set the ON/Toast shade dial to the always ON position. The oven indicator light will turn on. Preheat oven for five minutes. Place food on the wire rack or in the baking pan. When warming, we recommend placing oven rack in the "B" position. (See rack position diagram at right).

Toast

To toast, make sure the oven is in position B, as indicated in the diagram on this page. If toasting two items, center them in the middle of the rack. Four items should be evenly spaced – two in front, two in back. Six items should be evenly spaced – three in front, three in back. Close the glass door.

Shade Selection

Turn temperature dial to broil/toast 500°F (260°C). Set function dial to bake/toast. Turn the ON/Toast shade dial to desired shade setting from light to dark within the marked settings on this dial. This will turn on the toaster oven broiler and the oven indicator light will turn on.

Stop Toasting

When the toasting cycle is finished, the oven will ring once and turn off. If you wish to stop the toasting cycle before it is finished, simply turn the ON/Toast shade dial to Off. The toaster oven broiler will cancel your toast cycle.

Important Notes on Toasting

The oven rack must be in position B as indicated in the diagram on this page.

CLEANING AND MAINTENANCE

Always allow the oven to cool completely before cleaning.

1. Always unplug the oven from the electrical outlet.
2. Do not use abrasive cleansers, as they will damage the finish. Simply wipe the exterior with a clean damp cloth and dry thoroughly. Apply the cleansing agent to a cloth, not to the toaster oven, before cleaning.
3. To clean interior walls, use a damp cloth and a mild liquid soap solution or a spray solution on a sponge. Never use harsh abrasives or corrosive products. These could damage the oven surface. Never use Brillo pads, etc. on interior of oven.
4. To remove crumbs, slide out the crumb tray and discard crumbs. Wipe clean and replace. Crumb tray is dishwasher safe. To remove baked-on

grease, soak the tray in hot sudsy water or use nonabrasive cleaners.

Never operate the oven without the crumb tray in place.

5. Oven rack, broiling rack and drip tray are dishwasher safe. If heavily soiled, soak in hot sudsy water or use a nylon scouring pad or nylon brush. Dry thoroughly after washing.
6. Never wrap the cord around the outside of the oven. Use the cord storage cleats on the back of the oven.
7. Any other servicing should be performed by an authorized service representative.

IMPORTANT

After cooking greasy foods and after your oven has cooled, always clean top interior of oven. If this is done on a regular basis, your oven will perform like new. Removing the grease will help to keep toasting consistent, cycle after cycle.
